# Selectable High Frequency LP/BP Filter Data Sheet

MSHFS1/MSHFS2/MSHFS3/MSHFS4/MSHFS5/MSHFS6

## Description

The selectable high frequency lowpass/bandpass filter IC is a CMOS chip that can be configured for either a lowpass or a bandpass filter. The lowpass response can be a 6 pole Butterworth, Elliptic or Bessel filter. The band pass response can be a six pole full, third or sixth octave bandpass filter. The device uses switched-capacitor filters and no external components (except for decoupling capacitors) are required. Only an external clock is needed.

A four input multiplexor and externally selectable gain setting pin, along with a power down and clock to corner ratio select pin are included in the 16 pin version. An 8 pin version is also available for compact PC board layouts. MSHFS3, MSHFS4 and MSHFS6 are lower current, lower frequency versions.

## Features

- Six Filter Types In One Package
- No External Components
- Switched-Capacitor Filters
- High Frequency Operation
- Input Multiplexor
- Adjustable Gain 0, 10 or 20 dB
- Small Package Size
- Low Cost
- On Chip Power Save Pin
- ANSI Compatible Bandpass

## Applications

- Spectrum Analyzers
- General Purpose Systems
- Portable Systems
- Anti-Alias Filters
- Reconstruction Filters
- Telecommunications
- Tracking Filters
- Harmonic Analysis
- Noise Analysis
- Data Communication
- Wireless Applications

## Electrical Characteristics \_\_\_\_\_

(VDD = +5.0V, T = 20 °C)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
<b>DC Specifications</b>						
Operating Voltage	VDD		4.0	5.0	5.5	V
Supply Current	IDD	MSHFS1, MSHFS2, MSHFS5		24	30	mA
Supply Current	IDD	MSHFS3, MSHFS4, MSHFS6		4	9	mA
Supply Current in Power Down Mode	IDD			200		uA
<b>AC Specifications</b>						
Gain	Av		-0.5	0	0.5	dB
Noise	en	To 1/2 Sample		350		uVrms
Distortion	THD	A weighted		-61		dB
Signal Swing		1 kHz	3.5	4.0		V p-p
Input Impedance	ZIN			1.0		Mohm
Output Drive	Io			400		uA
Output Impedance	Zo			500		ohm
Output Capacitive Load					20	pF
Clock to Corner		MSHFS5, MSHFS6		12.5		
Clock to Corner		MSHFS1, MSHFS3		6.25		
Clock to Corner		MSHFS2, MSHFS4, Fo=1		12.5		
Clock to Corner		MSHFS2, MSHFS4, Fo=0		6.25		
Center Frequency Range	Fo	MSHFS1, MSHFS2, MSHFS5	0.00001	3		MHz
Center Frequency Range	Fo	MSHFS3, MSHFS4, MSHFS6	0.00001	1		MHz
<b>Ripple</b>						
Elliptic Lowpass				0.2		dB
Full Octave				0.2		dB
Third Octave				0.2		dB
Sixth Octave				0.2		dB
<b>Stop Band Rejection</b>						
Elliptic Lowpass				70		dB
Bessel Lowpass				60		dB
<b>40 dB Bandwidth</b>						
Full Octave		Normalized Fo	0.3		3	
Third Octave		Normalized Fo	0.6		1.67	
Sixth Octave		Normalized Fo	0.76		1.32	
<b>Bandpass Q</b>						
Full Octave Q	Q			1.5		
Third Octave	Q			4.5		
Sixth Octave	Q			9		

note 1: Sample rate ratio is 2X clock to corner ratio.

## Filter Selection \_\_\_\_\_

The filter type is selected using the two filter select pins, TYPE and FSEL, FSEL is a CMOS level pin that selects lowpass or bandpass (lowpass = 0, bandpass = 1). TYPE is a tertiary control pin that selects the filter response. State 0 is VSS, state 1 is GND and state 2 is VDD.

TYPE	Lowpass	Bandpass
0	Butterworth	Full Octave
1	Bessel	Third Octave
2	Elliptic	Sixth Octave

## Gain and Frequency Selection \_\_\_\_\_

The Gain control pin G is a tertiary control pin where state 0 is VSS, state 1 is GND level and state 2 is VDD.

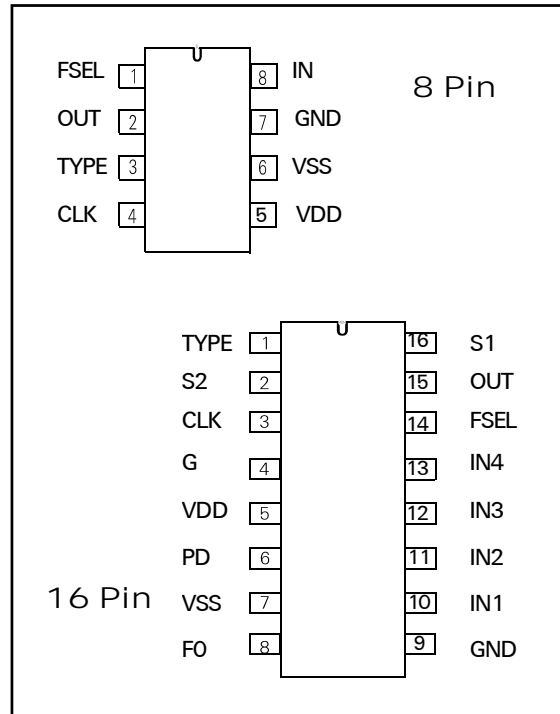

G	Gain
0	0dB
1	10dB
2	20dB

The frequency control pin FO is a CMOS level pin where HIGH is clock to corner of 12.5 to 1 (25 to 1 for Bessel) and LOW is clock to corner of 6.25 to 1 (12.5 to 1 for Bessel). The sample rate ratio is twice the clock to corner ratio (double sampling).

## Pin Description \_\_\_\_\_

- 1. TYPE Filter Response Select Pin.
- 2. S2 Input Multiplexor Select Pin
- 3. CLK Sine Wave Clock Input
- 4. G Gain Select Pin
- 5. VDD Positive Power Supply, Typically 2.5 Volts for Split Supply, 5.0 Volts for Single Supply
- 6. PD Power Down Pin, CMOS level, Hi = Power Down
- 7, VSS Negative Power Supply, Typically 2.5 Volts for Split Supply, 0 Volts for Single Supply
- 8. FO Clock to Corner Select Pin
- 9. GND GND Pin, 0V for Split Supplies 2.5 Volts Typical for Single Supply
- 10. IN1 Input 1, Select Code 00
- 11. IN2 Input 2, Select Code 01
- 12. IN3 Input 3, Select Code 10
- 13. IN4 Input 4, Select Code 11
- 14. FSEL Selects Filter  
0 = Low Pass, 1 = Bandpass
- 15. Out Filter Output
- 16. S1 Input Multiplexor Select Pin

## Pin Configuration \_\_\_\_\_

MSHFS1/MSHFS2/MSHFS3/MSHFS4/MSHFS5/MSHFS6

## Block Diagram

## Absolute Maximum Ratings

Power Supply Voltage	+6V
Storage Temperature	-60 to +150 C
Operating Temperature	-40 to +85 C

## Digital Levels

All the clock and control pins (except FSEL, CLK and G) are referenced between GND and VDD. In single supply applications, the digital levels should be CMOS levels from VSS to VDD. In dual supply systems, the digital levels should be CMOS levels from GND to VDD.

Part Number	Package	Operating Temperature
MSHFS1P	8 Pin Dip	-40 - 85 C
MSHFS2P	16 Pin Dip	-40 - 85 C
MSHFS3P	8 Pin Dip	-40 - 85 C
MSHFS4P	16 Pin Dip	-40 - 85 C
MSHFS5P	8 Pin Dip	-40 - 85 C
MSHFS6P	8 Pin Dip	-40 - 85 C
MSHFS1S	8 Pin SOIC	-40 - 85 C
MSHFS2S	16 Pin SOIC	-40 - 85 C
MSHFS3S	8 Pin SOIC	-40 - 85 C
MSHFS4S	16 Pin SOIC	-40 - 85 C
MSHFS5S	8 Pin SOIC	-40 - 85 C
MSHFS6S	8 Pin SOIC	-40 - 85 C

## Input Selection

The input is selected using the Input Select Pins S1 and S2.

S2	S1	Input
0	0	1
0	1	2
1	0	3
1	1	4

To order a RoHS compliant part, add "-RoHS" to the end of a part number above.
